Art Unit: 2121

## **DETAILED ACTION**

1. Claims 1-11 and 14-15 are presented for further examination.

## **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

- Claim 15, line 1, delete "claim 13" and replace with -- claim 14 --.

## Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-11 and 14-15 are allowed.

As per claims 1-11 and 14-15, specifically independent claims 1 and 14, the prior art of record fails to show a method for remotely controlling a destination terminal wherein a signaling protocol message contains software code which is executed by the destination terminal in order to have the destination terminal controlled, in combination with the other claimed features and or limitations as claimed.

Art Unit: 2121

It is noted that several references were located with respect to session initiation protocol, a well-known protocol utilized for multimedia data and control architecture, and which was formed by the Internet Engineering Task Force (IETF). Other known multimedia communication signaling protocols are Resource Reservation Protocol (RSVP), Real-Time Transport Protocol (RTP), Real-Time Streaming Protocol (RTSP), Session Description Protocol (SDP) and Session Announcement Protocol (SAP).

Page 3

None of these protocols have been disclosed as being utilized for remotely controlling a destination terminal wherein a signaling protocol message contains software code which is executed by the destination terminal in order to have the destination terminal controlled, in combination with the other claimed features and or limitations as claimed.

The closest available prior art appears to utilize an Internet address as a piece of data that is embedded into a signaling protocol message. However, in light of the applicants Remarks filed on 9/8/2005, an Internet address is not considered code, per se. No reference was found that disclosed embedding code into a signaling protocol message, wherein code has been defined by the applicant to be distinct from a URL.

## Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ronald D. Hartman Jr. whose telephone number is (571) 272-3684. The examiner can normally be reached on Mon.-Fri., 11:00 - 8:30 pm, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Knight can be reached on (571) 272-3687. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
